

DRAFT VETERINARY QUARANTINE REGULATIONS

ARTICLE (1) – DEFINITIONS AND EXPRESSIONS

The Minister

Minister of Agriculture and Fisheries

The Ministry

Ministry of Agriculture and Fisheries

Slaughter Animals

Imported animals for direct slaughter or those which stay under veterinary supervision from their arrival until they are slaughtered.

Breeding Animals

Imported animals for other purposes other than direct slaughter such as fattening and breeding etc.

Equidae:

Horses, mules, donkeys, zebras and ponies.

Pets

Animals kept in houses such as the cats, dogs, and ornamental birds e.g. parrots, peacocks and ornamental fish.

Animal Products

Meat and poultry and fresh, chilled, frozen, smoked, dried and processed fish and meat and fish powder and fresh, dried, concentrated and evaporated milk and its products such as cheese and butter and eggs whether for consumption or hatching and egg powder and semen, embryos and animal gelatin.

Animal by-products

Includes refuse and fresh and dried blood, horns, hoofs, hairs, wool, furs, feathers, animal manures, bones, intestines, rumen and the remains of animals used in fertilizers and fish fins and bones and bones and sea shell powder.

Biological Products

Includes vaccines, viruses, live or processed and killed microbes intended for animal diseases, diagnosis, research, treatment and protection.

Semen

Semen from breeding animals (mammals and birds) which used in artificial insemination process.

Embryos	□ □ □
Live fertilized egg from breeding animals (mammals and birds)	
Veterinary Medical Products	□ □ □
Veterinary Medicines	
Accompanying Exigencies:	□ □ □
Include saddles and ruins and filling tools and covers and saddle blankets and all tools accompanying the animal.	
Supervising Doctor	□ □
Veterinary doctor appointed by the supervising government authority responsible for the veterinary quarantine.	
Competent Veterinary Authority	□ □ □
Veterinary Department responsible for the Veterinary Quarantine.	
Animal Feed	□ □ □
Processed and unprocessed food substances used for animal consumption.	
Quarantine	□ □ □
Any building or a group of buildings in which the animals are completely isolated under the supervision and monitoring of the supervising doctor to ensure their freedom from infection of diseases without allowing them to mingle directly with other animals.	
Infectious Diseases	□ □
Any contagious and infectious disease classified under lists (A & b) as per the classification of the International Office of Epizooties (OIE) and the forthcoming amendments.	
Animal Consignment and Transit	□ □
All animals, animal products and by products whether incoming or outgoing or passing through the country on which the provision of this regulation shall apply.	
Approved Certificate (attested)	□ □
Certificate issued and endorsed by government authority and if it is issued by any authority other than Gulf Cooperative Council Countries it shall be attested by the Embassy of the Sultanate of Oman or any one of the member countries Embassies or their representatives or their acting authority.	
The Country	□

CHAPTER TWO

Veterinary Quarantine

ARTICIEL (2):

The import of all types of animals, animal products and by-products (feed and biological products to and from the Sultanate shall be subject to the rules and provisions of this veterinary quarantine regulations.

ARTICLE (2.1):

The entry of the imported animals or animal products and by-products or accompanying exigencies shall be authorized only through the recognized entry ports or inlets.

ARTICLE (2.2):

The Minister on advice from the competent veterinary authority in the Ministry may prevent the entry of animals through some inlet ports or add other new inlets.

ARTICLE (3):

Any one who wishes to import animals or animal products or by-products or biological products shall submit an application to the competent veterinary authority for obtaining veterinary health certificate indicating the type of the animal, animal product or accompanying exigency and the selling and shipping authority and the arrival date of the consignment, the transportation mean and the inlet port.

ARTICLE (3.1):

The importing entities of the animals shall notify the veterinary quarantine authority of the competent veterinary authority about the arrival date of the animals atleast 48 hours before the actual arrival date.

ARTICLE (3.2):

The import veterinary permit shall be valid for one month.

ARTICLE (3.3):

The Minister on advice from the competent veterinary authority in the Ministry may apply the same action with respect to the export.

ARTICIEL (4):

ARTICIEL (4.1):

The competent veterinary authority shall preserve the right to take any action it may consider necessary with respect to the inspection, health conditions, tests, vaccination and to take samples of the imported consignment or products or animal by products and send them to the laboratories to ensure their clearance from the infectious and contagious diseases and their suitability for human consumption before releasing them.

ARTICLE (4.2):

If it is proven that the imported consignment is not suitable for consumption, it shall be rejected and prohibited from entry to the Sultanate and shall be returned to the country of origin or destroyed on the account of the importer. A certificate shall be issued by the supervising doctor indicating the rejection of the consignment, the reasons for the rejection and the destruction of the consignment if it has been carried out.

ARTICLE (4.3):

The entry of the consignments of animals, feed, veterinary biological products and accompanying exigencies to the Sultanate from countries other than the member countries shall not be permitted except through the recognized inlet ports which have veterinary quarantines and the competent veterinary authority may authorize when necessary the entry of the imported animals through all or some of the ports and inlets and place them in the veterinary quarantines for the period it may consider necessary.

ARTICLE (4.4):

The entry of the animals arriving on foot to the Sultanate shall not be authorized without obtaining a license in advance from the competent veterinary authority and it shall be inspected by the supervising doctor whether they are intended for slaughter, grazing or breeding purposes.

ARTICLE (5):

ARTICLE (5.1):

The imported consignment of animals, animal products or by-products or feed for consumption, processing or other purposes shall be accompanied with international veterinary health certificate issued by a government authority in the country of origin and endorsed by the Embassy of the Sultanate or any country of the member countries and shall satisfy all health conditions and details required in the imported consignment along with the following details:

ARTICIEL (5.1.1):

The name of the consignor, the country of origin, name of the importer, number of the animals or the quantity of the consignment, particulars of the

consignment, the exporting country, number of the production operation, date of the production and expiry and the consignment distinguishing marks.

ARTICLE (5.1.2):

The competent veterinary authority in the Sultanate may request any additional clarifications and details in the health certificates according to the development in the country of origin, export and transit to ensure the safety of the consignment.

ARTICLE (5.2):

The imported animal consignments shall be accompanied with import veterinary permit issued by the competent veterinary authority.

An accurate disinfection operation shall be carried out to all pens, areas, (Five) cages, tools and consigenciess under competent technical supervision before reuse on the account of the importer or the owner of the consignment.

ARTICLE (12.6):

The tools or remains of any type shall not be taken out of the Quarantine (One)
without obtaining a permission from the supervising doctor.

The organic materials from the animals such as manure shall not be used (Two)
before (90) days from the date of the release of the producing animal.

Any perished animal or part of it shall not be taken out of the (Three)
Quarantine without a permission from the supervising doctor and for the
laboratory diagnosis purpose only.

The milk and any animal product from the detained animals shall (Four)
not be permitted to be taken out of the Quarantine and shall not be used
for other purpose other than feeding the animals inside the Quarantine.

ARTICLE (12.7): Individuals

The working persons in the Quarantine and those who are taking (One)
care of the animals or birds in the quarantine shall wear protective clothes
and shoes designated for the work inside the quarantine throughout their
stay in the quarantine.

These persons shall use disinfections or any health measure as (Two)
may be decided by the supervising doctor.

These persons shall maintain the cleanliness of themselves and (Three)
their clothes throughout their working course.

The reception staff shall not have right to enter the pens and areas (Four)
where the animals are kept without obtaining a permission from the
supervising doctor and shall comply with the items (a & b)) above.

ARTICLE (12.8): Reports and Registration

All persons who enter or depart the Quarantine shall be registered.(One)

All vehicles entering or leaving the quarantine shall be registered.(Two)

All animals and birds which enter or depart the quarantine shall be (Three)
registered.

Any diseases, treatments or routine veterinary actions shall be (Four)
registered.

The officer responsible of the quarantine shall submit monthly report to the (Five)
competent veterinary authority about all registered activities and other
related details.

ARTICLE (13): Release

Temporary release (One)

The supervising doctor at the inlet point may issue temporary release .*

to the animals intended to be taken to the veterinary Quarantine to enable the transportation of these animals from the inlet point to the Quarantine.

The supervising doctor may issue temporary release to the animal products of which a sample has been taken for laboratory test and they shall be kept in the stores of the company under the supervision of the supervising doctor and the municipality until a final decision is taken with respect to its validity according to the laboratory report.

Final release (Two)

The supervising doctor shall issue a final release to the imported consignment of animals or birds or animal products or by products or consignments if they are proved to be safe and valid.

CHAPTER FOUR

General Rules

ARTICLE (14):

If any animals or animal products or by-products or consignments are imported without obtaining a veterinary health certificate from the competent veterinary authority, this authority shall have the right to prevent the consignment from entry and order its return directly to the country of origin on the account of the importer.

ARTICLE (15)

If live animals or birds consignment arrives from a country which is not infected with infections and contagious diseases according to (OIE) report and is not accompanied with the original health certificates and documents it shall be released temporarily and detained in the quarantine or in the custody of the owner for the period to be determined by the competent veterinary authority and under its supervision until its health safety has been confirmed.

ARTICLE (16)

If a live animals or birds consignment arrives whereas no quarantine is available in the area the supervising doctor shall have the right to isolate these animals and birds in a separate place to prevent them mingling with other animals and such place shall be considered as a Quarantine subject to the rules of this regulations according to the decision of the supervising doctor.

ARTICLE (17):

If meat or animal products or by-products or consignees (One) consignment arrives without the original health certificates and documents it shall be temporarily released after the inspection and necessary health measures to ensure its safety and validity from infectious and contagious diseases provided that it shall be stored under the supervision of the competent veterinary authority or the municipality.

The owner shall undertake to provide the entire required original certificates and documents within one week from the date of arrival.

If the owner fails to provide the required original certificates and (Two) documents the competent veterinary authority shall take the necessary action according to the public interest requirement with respect to the release of the consignment.

ARTICLE (18)

The competent veterinary authority shall have the right to carryout the necessary treatments and vaccinations to any imported animals or birds arriving to the Sultanate to secure the safety of the livestock in the country.

ARTICLE (19)

The competent veterinary authority shall have the right to detain any animal inside the Sultanate if it is infected by a disease or suspected of bearing one of the infectious and contagious diseases and apply the internal Quarantine measures accordingly.
