

Organised by: Ministry of Economy/AZE

Session Type: Panel Discussions

Session Title

Panel on “AI at the Helm: Steering the Digital Economy through Technological Forecasting”

Session Description

The global economy is increasingly shaped by rapid technological advancements, particularly those driven by Artificial Intelligence (AI). The Fourth Industrial Revolution has ushered in an era of interconnectedness, where real-time data analysis and automation are fundamental drivers of economic growth. AI's potential to forecast technological trends and inform strategic economic decisions is transforming traditional business models and guiding economies through unpredictable global shifts.
